DETAILED ACTION

Drawings

1. The drawings are objected to because the elements in Fig. 1 and 3 (i.e. ER, CR, EF, AF, BE) need label. Corrected drawing sheets are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Objections

2. Claim 4 is objected to because of the following informalities: The word "an" on line 1 should be removed. Appropriate correction is required.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

4. Claims 1 is rejected under 35 U.S.C. 102(e) as being anticipated by Su et al (U.S. Patent 6,625,161 B1).

Regarding to claim 1, Su discloses a method for scheduling packets in a router 17 of a packet-switched network having a plurality of service classes (Fig. 1 col. 3 lines 57-60, the traffic aggregate read on the service classes), the router including one queue 117 for each service class (Fig. 2 col. 4 lines 36-39), each queue storing packets to be transmitted according to the associated service class (Fig.2 col. 4 lines 39-42), comprising measuring an average queue length for a particular queues (Fig. 3 col. 5 lines 17-22) and allocating bandwidth (reassign communication channels 115a-c) to each of the plurality of service classes according to the average queue length (Fig. 3 col. 5 lines 29-34).

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 3 and 13 rejected under 35 U.S.C. 103(a) as being unpatentable over Su in view of Silberschatz et al (U.S. Patent 6,556,578 B1).

Regarding to claims 3 and 13, Su discloses all the limitation with respect to claim 1, except for the average is an exponential weighted moving average. However, Silberschatz discloses a method for managing a buffer pool containing a plurality of queues, wherein the measure of an average queue length is determined using an exponential weighted moving average (col. 2 lines 66-67). Thus, it would have been obvious to a person of ordinary skill in the art to employ an exponential weighted moving average as taught by Silberschatz in Su's system to allows the most recently collected data have more influence on the average than older ones.

Allowable Subject Matter

7. Claims 2 and 4-12 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
